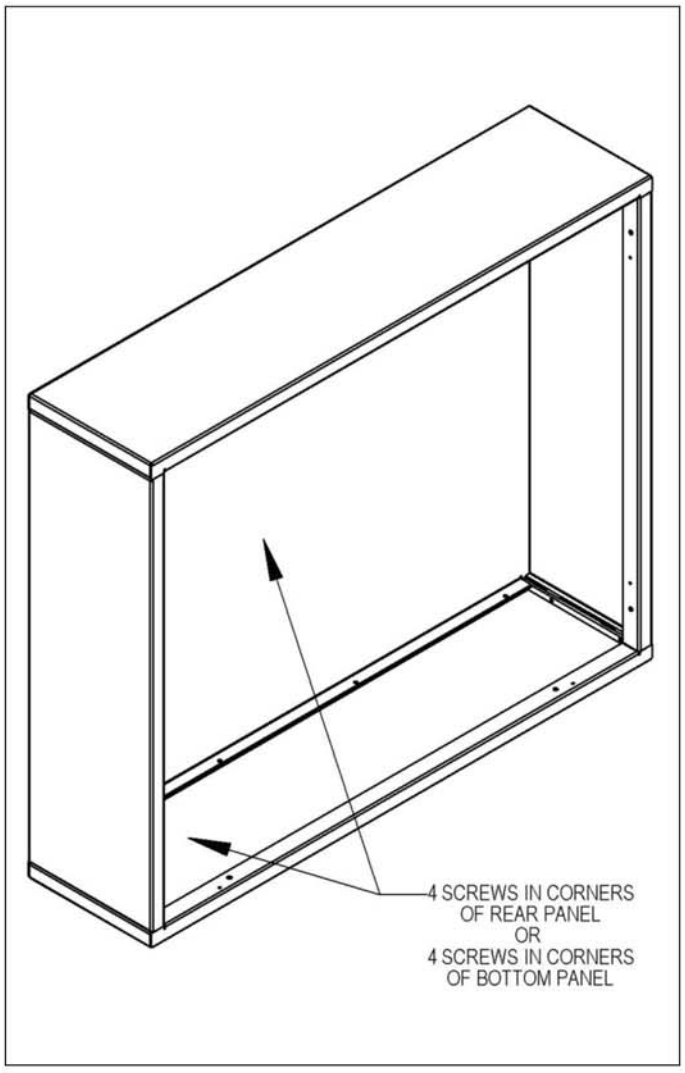
Cell Phone Lockers - H19000 Series
Surface Mount Installation Instructions

Installation of the Surface Mounted Enclosure
Remove the locker unit from the enclosure. Drill mounting holes in the enclosure to fasten it to the mounting surface. It is important to use at least four (4) fasteners (not provided) and place one each at the four (4) corners of the mounting surface (either on the rear panel or the bottom panel). Choose appropriate hardware for the particular conditions of the installation.



Installing the Cell Phone Locker into the Enclosure
Install the locker unit into the enclosure by sliding it into the enclosure until its front peripheral flange is flush against the front of the enclosure. Open the four corner compartments of the cell phone locker. Install #8 x 1-1/4 in. long screws (provided) through the top and bottom of the locker unit into the enclosure. Close the compartment doors.

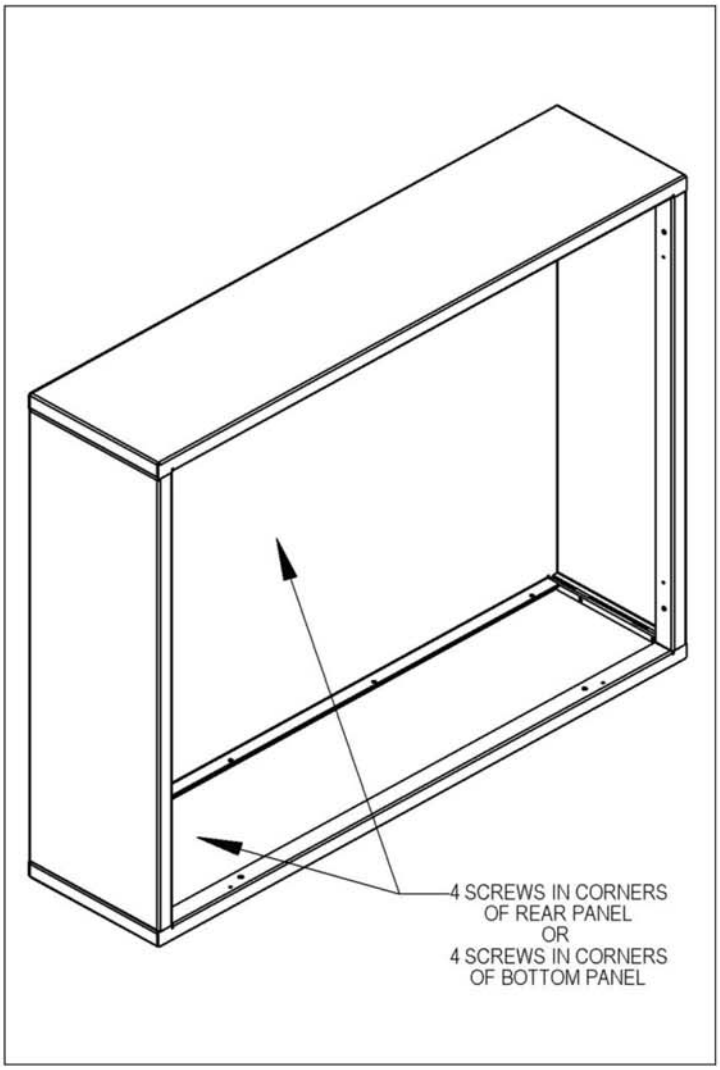
Surface Mount with Front Master Access Door Installation Instructions

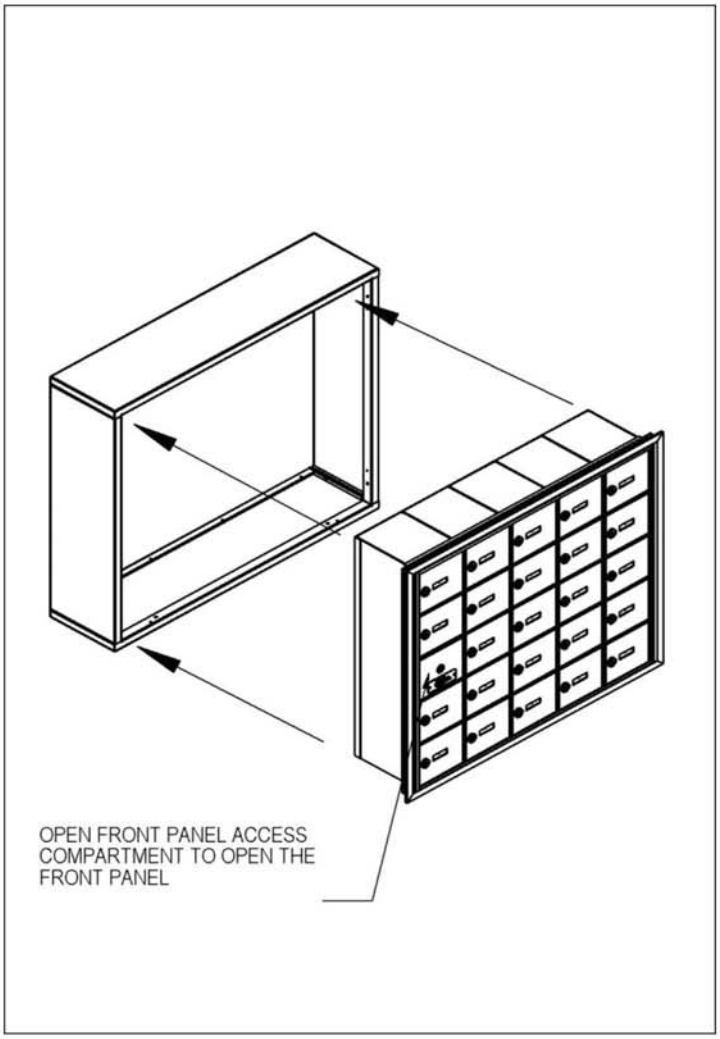
Installation of the Surface Mounted Enclosure

Remove the locker unit from the enclosure. Drill mounting holes in the enclosure to fasten it to the mounting surface. It is important to use at least four (4) fasteners (not provided) and place one each at the four (4) corners of the mounting surface (either on the rear panel or the bottom panel). Choose appropriate hardware for the particular conditions of the installation.



Installing the Cell Phone Locker into the Enclosure

Install the locker unit into the enclosure by sliding it into the enclosure until its front peripheral flange is flush against the front of the enclosure. Open the front panel access compartment of the cell phone locker then open the front panel. Install #8 x 3/4 in. long screws (provided) through the slots in the sides of the front peripheral flange of the locker unit into the enclosure. Close the front panel then the front panel access compartment.



Installation instructions are provided as general guidelines. It is advised that a professional installer be consulted. National Mailboxes assumes no product assembly or installation liability.

Cell Phone Lockers - H19000/H19100 Series
Surface Mount Installation Instructions

The surface mounted cell phone locker may be installed on the surface of a wall, on a table or a counter top. **It is the installer's responsibility to ensure the unit is properly anchored to prevent tearing out of a wall or tipping over on a table or counter top. See below for further information.**

WARNING: ***Installation of the surface mounted cell phone locker unit must be to a surface of sufficient load bearing strength. Attachment of the enclosure to the surface must be with fasteners that can adequately support the weight of the surface mounted cell phone locker unit. Installing to a deficient load bearing mounting surface and/or use of inadequate fasteners could cause the surface mounted cell phone locker unit to fall from the surface possibly resulting in serious injury.***

Installation Planning

1. Consider the weights in the table on the next page when designing the wall or selecting the appropriate fasteners and anchors to be used.
2. If attaching to studs in a custom built wall, determine the optimum location of the wall studs to which to fasten the units. Frame the wall with wood studs. Build a robust wall.
3. If attaching to studs in an existing wall, determine the stud locations, and position units to maximize the number of studs to which the units will be attached.
4. If not attaching to studs, choose an appropriate high strength anchor, especially if attaching directly to drywall. When attaching to drywall, place the anchor and fastener as close as possible to the studs to which the drywall is attached.
5. If attaching to a table or countertop, consider the combined weights of the units when selected the location to mount the units on top of. Ensure the mounting structure is of adequate strength to prevent the units from falling through the mounting surface.
6. If attaching to a table or countertop, use fasteners of adequate strength to secure the units to prevent the units from tipping over. On the surface mounted cell phone locker with a front access panel, use fasteners of adequate strength to secure the units to the table or countertop to prevent the units from tipping over when the front access panel is fully opened.

Installation instructions are provided as general guidelines. It is advised that a professional installer be consulted. National Mailboxes assumes no product assembly or installation liability.

The weights above include the surface mounted cell phone locker unit and from 25 to 140 lbs. of contents depending on the size of the cell phone locker.

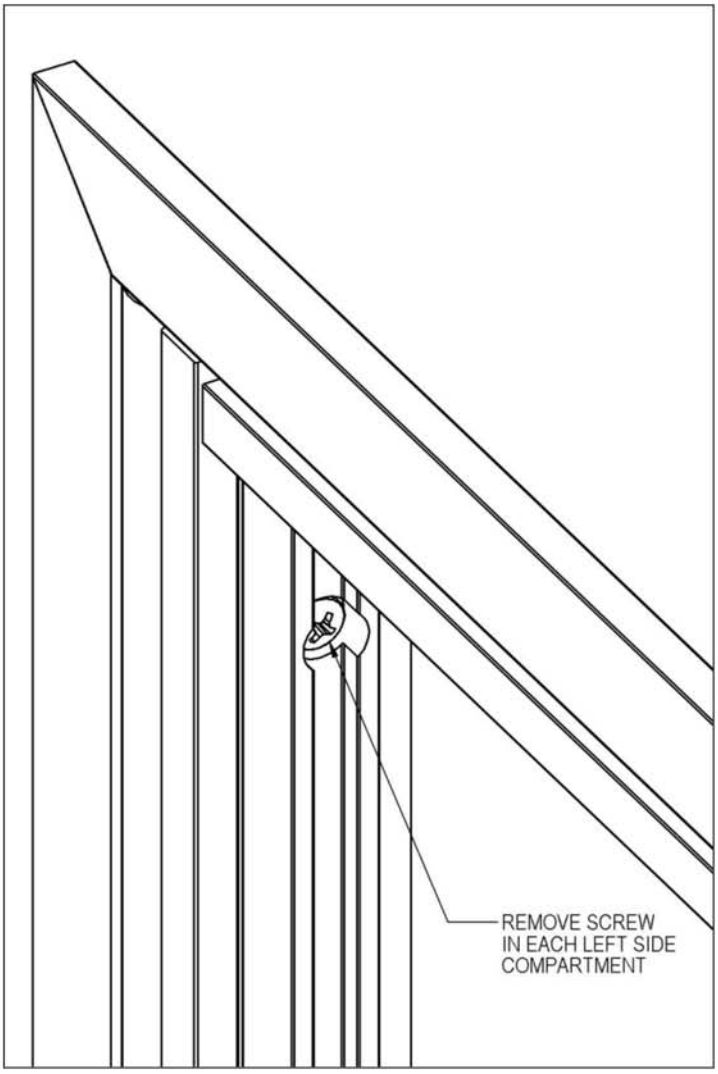
Installation instructions are provided as general guidelines. It is advised that a professional installer be consulted. National Mailboxes assumes no product assembly or installation liability.

Cell Phone Lockers - H19000 Series
Recessed Mount Installation Instructions

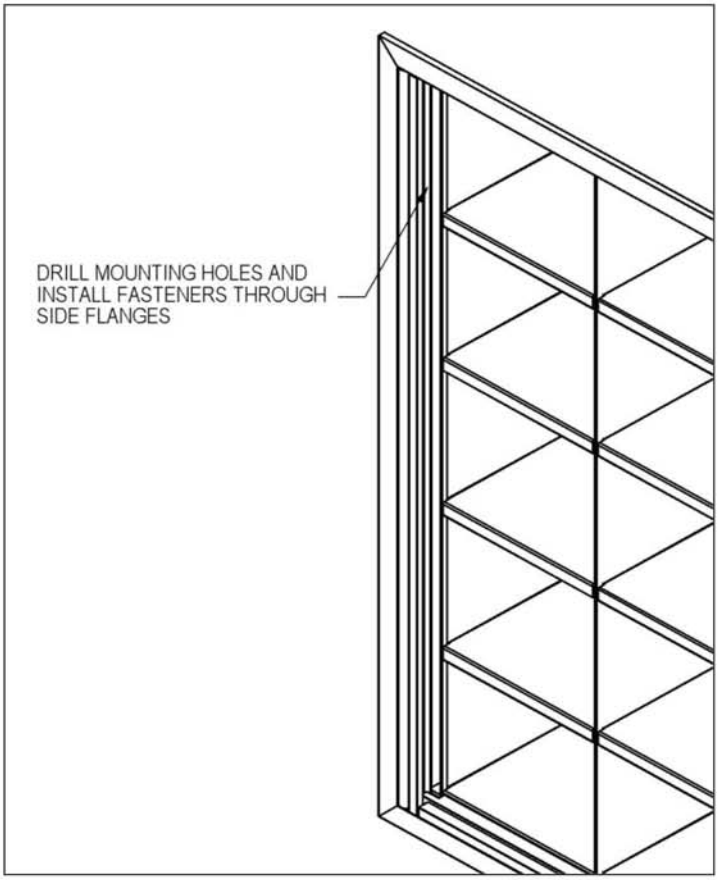
The recessed mounted cell phone locker must be securely supported by a frame constructed of 2"x4" or 2"x6" lumber. Construct support framing as shown on page 8 of these instructions. Cut a hole in the wall according to the Rough Opening Dimensions calculated on page 7.

Installation Instructions

Place the unit in the rough opening. Open all left hand compartment doors. Locate a screw in each compartment fastened into the left vertical door frame member (some compartments may not have a screw). Remove screws.



Open the front panel and drill mounting holes through the sides of the peripheral flange of the locker unit. Fasten the unit (hardware not provided) to the support framing. Close the front panel and re-install the removed screws.



Notes

1. Wall opening and lumber frame must be square.
2. Do not deform, force, or twist the locker frame to fit an incorrect rough opening or fit against an irregular surface.

Installation instructions are provided as general guidelines. It is advised that a professional installer be consulted. National Mailboxes assumes no product assembly or installation liability.

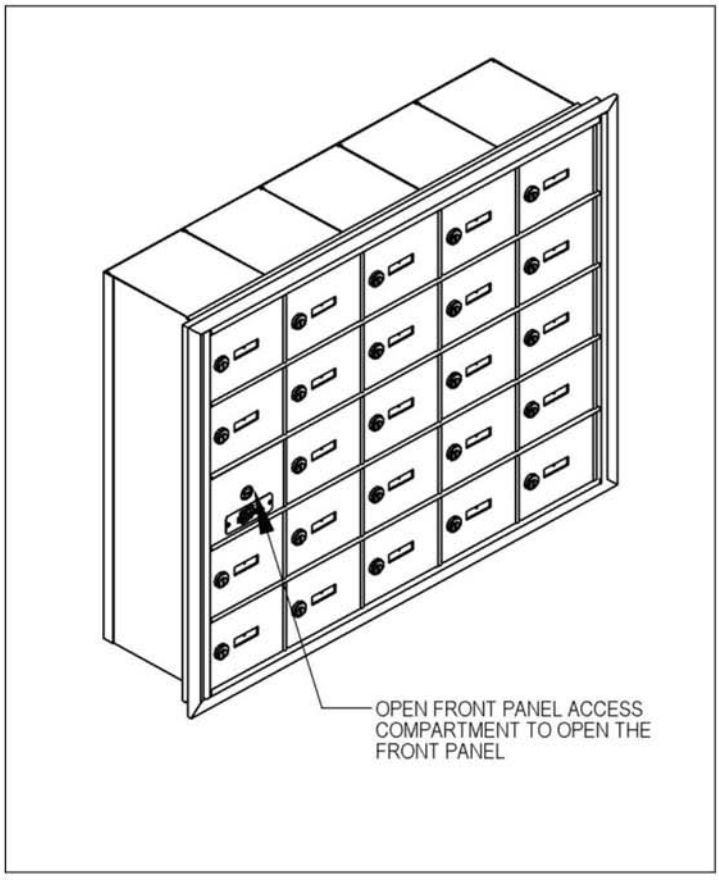
Cell Phone Lockers - H19100 Series

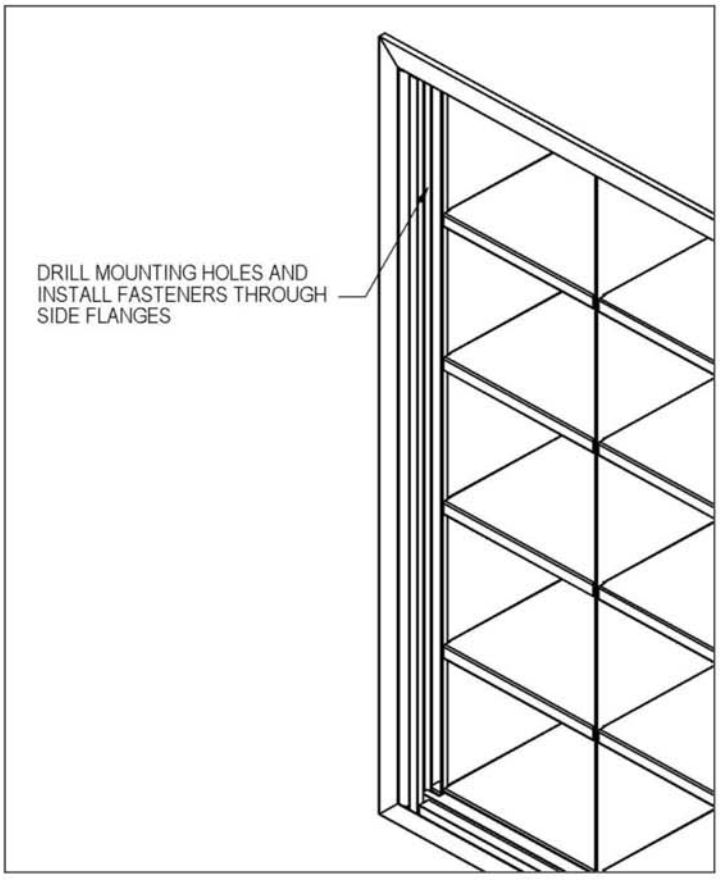
Recessed Mount with Front Master Access Door Installation Instructions

The recessed mounted cell phone locker must be securely supported by a frame constructed of 2"x4" or 2"x6" lumber. Construct support framing as shown on page 8 of these instructions. Cut a hole in the wall according to the Rough Opening Dimensions calculated on page 7.

Installation Instructions

Place the unit in the rough opening. Open the front panel access compartment of the cell phone locker then open the front panel. Fasten the unit (hardware not provided) to the support framing. Close the front panel then the front panel access compartment.





Notes

1. Wall opening and lumber frame must be square.
2. Do not deform, force, or twist the locker frame to fit an incorrect rough opening or fit against an irregular surface.

Installation instructions are provided as general guidelines. It is advised that a professional installer be consulted. National Mailboxes assumes no product assembly or installation liability.

19035/19135-15	5 "A" Doors Wide	35-3/4"	18-3/4"	6"

Calculation of Overall Dimensions of Multiple Units

Width and height of outside trim frame of each unit:

Overall Width = No. of doors wide times 6-1/2" plus 3-1/4"

Note - "B" door count as 2 "A" doors wide

Overall Height = No. of doors high times 5-1/2" plus 2-1/4"

Calculation of Rough Opening Dimensions

Width of Rough Opening = Overall Width less 1"

(For multiple units = Sum of Overall Widths less 1")

Height of Rough Opening = Overall Height less 1"

Installation instructions are provided as general guidelines. It is advised that a professional installer be consulted. National Mailboxes assumes no product assembly or installation liability.

Cell Phone Lockers - H19000/H19100 Series
Identification Window Installation Instructions

Installation of Identification Window

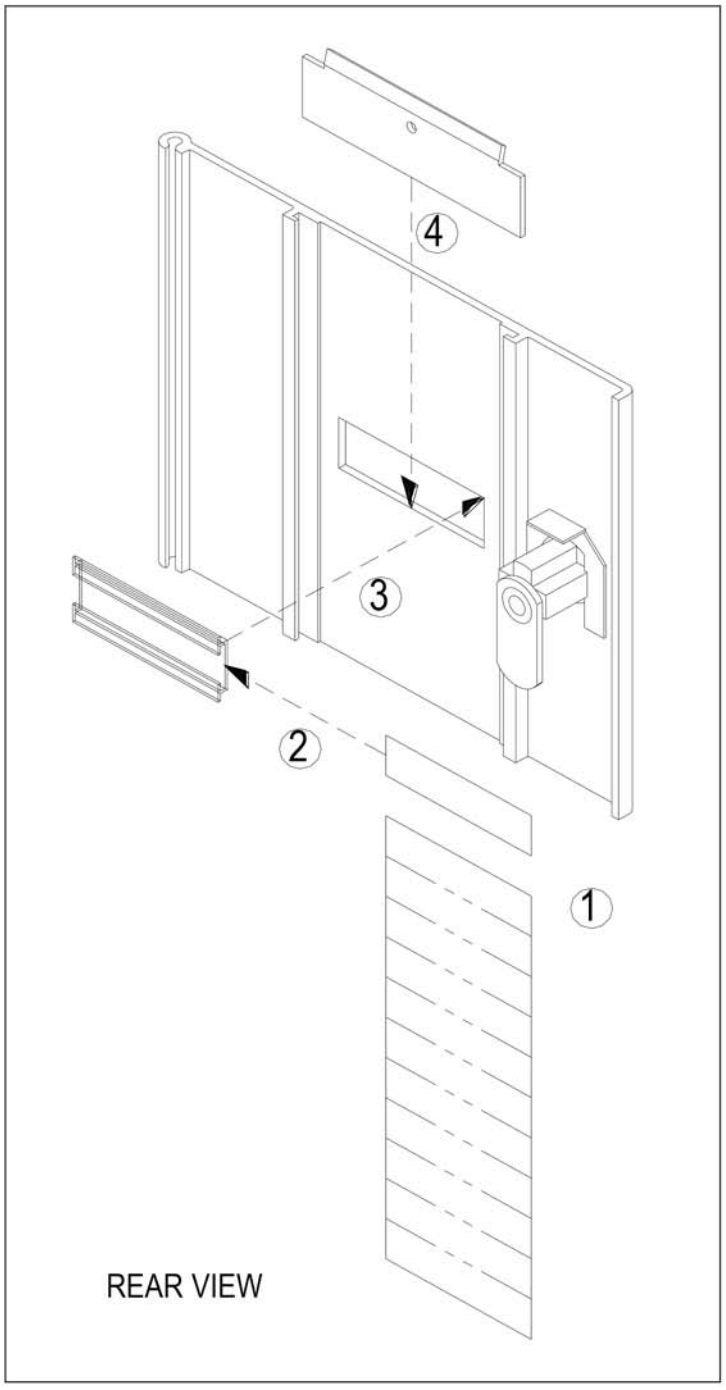
Identification labels, clear plastic windows, and metal window backup plates are provided, separately bagged, for use in marking the user's identity on each locker door. The steps below are numbered according to the picture to the right.

1. Mark the user's name or other appropriate identity on one of the ½" x 2" labels provided. Tear the label from the card.

2. Insert the label into the clear plastic window so that the marking will be visible from the front of the locker door.

3. Place the clear plastic window into the rectangular hole in the door so that the identity is visible from the front of the door.

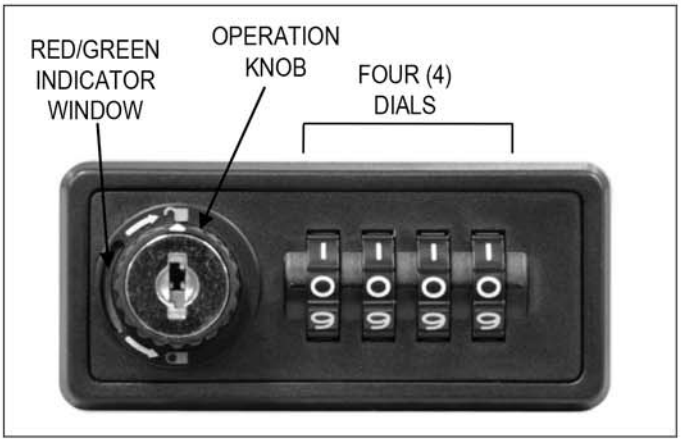
4. Slide metal window backup plate down into grooves at top of door. Slide plate down until it covers the plastic window and the bent lip of the plate rests on the top edge of the plastic window.



Installation instructions are provided as general guidelines. It is advised that a professional installer be consulted. National Mailboxes assumes no product assembly or installation liability.

Cell Phone Lockers - H19000/H19100 Series
Resettable Combination Lock Operation Instructions

The resettable combination lock is a durable and easy-to-use lock providing resettable combination access without the need for keys. ***Please read this entire page before use.***



The lock has a four (4) digit combination setting. When the lock is locked (closed), a red indicator appears in a window next to the operation knob. When the lock is unlocked (open), a green indicator appears in the window.

There are two (2) modes of operation: fixed combination or resettable combination. In fixed combination mode, the lock is continually opened and closed with the same custom combination that was set. In the resettable combination mode, the combination may be changed after each time the lock is opened.

The factory preset combination is 0000. Master key operation may be used at any time to open a lock.

Setup for a Fixed Combination

1. If locked, turn the four (4) dials to the factory preset combination (0000) or the known combination that unlocks the lock.

2. Turn the operation knob clockwise 180° to the open position. The indicator in the window will turn from red to green.

3. Turn the reset/fix stem on the back of the lock from the "Fix" to the "Reset" position.

4. Returning to the front of the lock, set the desired custom fixed combination on the four (4) dials.

5. On the back of the lock, return the reset/fix button back to "Fix".

The lock is now set to continuously open using the custom fixed combination. After locking, scrambling the four (4) dials will secure the contents.

Setup for a Resettable Combination

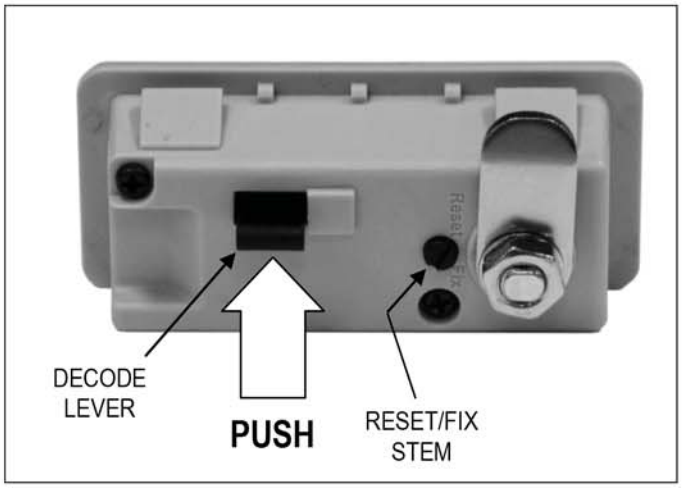
1. If locked, turn the four (4) dials to the factory preset combination (0000) or the known combination that unlocks the lock.

2. Turn the operation knob clockwise 180° to the open position. The indicator in the window will turn from red to green.

3. Turn the reset/fix stem on the back of the lock from the "Fix" to the "Reset" position. Leave the button in this position.

4. Close the door. Do not lock it.

The lock combination can now be resettable by the user setting their own desired combination before turning the operation knob to the locked position (red window indicator). After locking, scrambling the four (4) dials will secure the contents.



Decode Operation

Used to determine lock combination.

1. Open the door. Use the master key if necessary.

2. Push the decode lever up and hold it in place. Rotate each of the dials on the front of the lock until it stops or there is a "click" sound. Release the decode lever.

3. Each dial will now be in the "open" combination position.
